

Replace the cable

Does this solve the problem?

- 1] Yes
- 2] No
- 3] I don't know

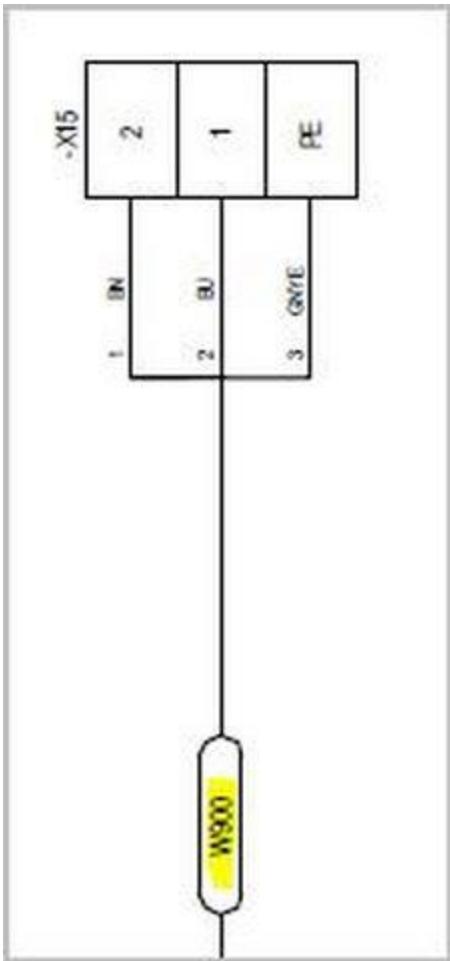

- **Explanation**

Check the cable for obvious physical damage.

Check the connection from the sensor switch connector to X15 in hub computer panel AK4.

Check the continuity of the cable. If the cable is found to be damaged, replace the cable.

Replace the switch

Does this solve the problem?

- 1] Yes
- 2] No
- 3] I don't know

- **Explanation**

Check the switch for obvious physical damage.

Check the ports on the sensor for debris that may be clogging the unit.

Check the connector of the sensor for damage.

INDICATOR F FLTR PIS3092-5.0	60098798	Bosch Rexroth

Replace the Filter

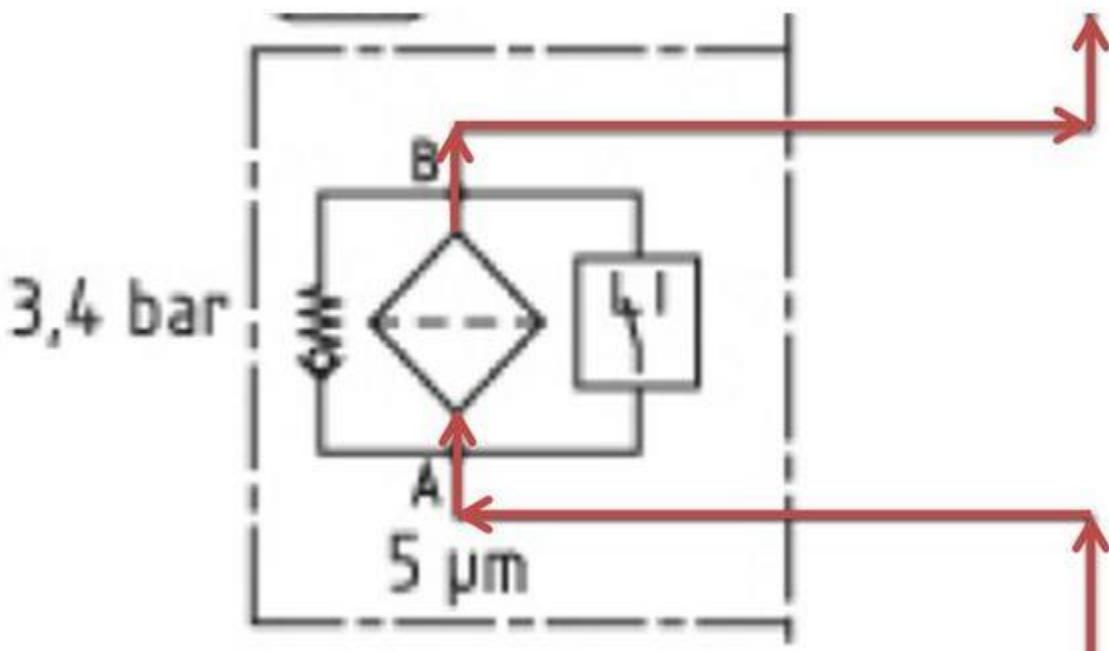

Does this solve the problem?

- 1] Yes
- 2] No
- 3] I don't know

- **Explanation**

The high pressure filter in the hub is replaced at every service and therefore is not commonly contaminated to the point of setting this fault. If through the process of elimination, it is determined that the filter is clogged, replace the filter.

Replace the Hub computer

Does this solve the problem?

- 1] Yes
- 2] No
- 3] I don't know

- **Explanation**

Visually inspect the connector at the hub computer. Inspect for damage, contamination or corrosion. If the connector on the hub computer printed circuit board is damaged beyond repair, replace the hub computer. If there is contamination or corrosion, clean the connector and pins.
